

CAPABILITIES STATEMENT

Environmental Remediation Design & Imaging Experts

- *Reduce Your Cleanup Costs by 40-60%*
- *Remediation Site Characterization and Diagnostic Evaluation*
- *Global Deployment of High Resolution Investigation Tools*
- *Real Time Data & Results Delivered to Any Device*

CORE COMPETENCIES

Performance of Remedial Site Characterizations to map the full extent of contaminated land in support of remediation design, evaluation of failed remediation efforts, followed by optimization of existing remediation systems.

Optimization of Remediation Systems through a systematic evaluation of installed systems, in-situ geochemical and hydraulic parameters, contaminant distribution, and transport pathways to establish performance metrics for future liability management.

SmartData Solutions® Real-Time Data, Real-Time Results in the Cloud

- Best Data. High-resolution 3D presentation of the extent of soil and groundwater contamination.
- Deepest Understanding. A complete overview of local site geology, hydrogeology, geochemistry, and contaminant chemistry.
- Pinpoint Recommendations. More accurate delineation for the best possible remediation design.

DIFFERENTIATORS

- Global delivery combined with a nation-wide network of service centers.
- 26 years of remedial design characterization experience, including HRSC, and diagnostic evaluation of failed remediation efforts
- Cloud-based decision support system for real-time information delivery
- Experienced exporter with operations in Latin America and Africa
- Strong health and safety focus with record of Zero Lost Work Days
